Modern Cryptography Primer: Theoretical Foundations and Practical Applications Czesław Kościelny, Mirosław Kurkowski, Marian Srebrny

Cryptography has experienced rapid development, with major advances recently in both secret and public key ciphers, cryptographic hash functions, cryptographic algorithms and multiparty protocols, including their software engineering correctness verification, and various methods of cryptanalysis. This textbook introduces the reader to these areas, offering an understanding of the essential, most important, and most interesting ideas, based on the authors' teaching and research experience.

After introducing the basic mathematical and computational complexity concepts, and some historical context, including the story of Enigma, the authors explain symmetric and asymmetric cryptography, electronic signatures and hash functions, PGP systems, public key infrastructures, cryptographic protocols, and applications in network security. In each case the text presents the key technologies, algorithms, and protocols, along with methods of design and analysis, while the content is characterized by a visual style and all algorithms are presented in readable pseudocode or using simple graphics and diagrams.

The book is suitable for undergraduate and graduate courses in computer science and engineering, particularly in the area of networking, and it is also a suitable reference text for self-study by practitioners and researchers. The authors assume only basic elementary mathematical experience, the text covers the foundational mathematics and computational complexity theory.

From reader reviews:

Alma Bulger:

Book is definitely written, printed, or illustrated for everything. You can realize everything you want by a book. Book has a different type. We all know that that book is important factor to bring us around the world. Adjacent to that you can your reading expertise was fluently. A book Modern Cryptography Primer: Theoretical Foundations and Practical Applications will make you to possibly be smarter. You can feel much more confidence if you can know about almost everything. But some of you think which open or reading a new book make you bored. It is far from make you fun. Why they might be thought like that? Have you in search of best book or acceptable book with you?

Sherry Clark:

What do you consider book? It is just for students because they are still students or it for all people in the world, what best subject for that? Merely you can be answered for that question above. Every person has distinct personality and hobby for each other. Don't to be pressured someone or something that they don't need do that. You must know how great as well as important the book Modern Cryptography Primer: Theoretical Foundations and Practical Applications. All type of book can you see on many resources. You can look for the internet options or other social media.

Louis Cline:

Book is to be different for every grade. Book for children until finally adult are different content. To be sure that book is very important usually. The book Modern Cryptography Primer: Theoretical Foundations and Practical Applications had been making you to know about other knowledge and of course you can take more information. It is very advantages for you. The e-book Modern Cryptography Primer: Theoretical Foundations and Practical Applications is not only giving you far more new information but also to become your friend when you feel bored. You can spend your spend time to read your publication. Try to make relationship with the book Modern Cryptography Primer: Theoretical Foundations and Practical Applications. You never truly feel lose out for everything in case you read some books.

Beverly Thomas:

That publication can make you to feel relax. This kind of book Modern Cryptography Primer: Theoretical Foundations and Practical Applications was bright colored and of course has pictures around. As we know that book Modern Cryptography Primer: Theoretical Foundations and Practical Applications has many kinds or style. Start from kids until young adults. For example Naruto or Private eye Conan you can read and feel that you are the character on there. Therefore , not at all of book are usually make you bored, any it offers you feel happy, fun and unwind. Try to choose the best book in your case and try to like reading in which.
