Wireless Communication in Underground Mines: RFID-based Sensor Networking L. K.

Bandyopadhyay, S. K. Chaulya, P. K. Mishra

Wireless communication has emerged as an independent discipline in the past decades. Everything from cellular voice telephony to wireless data transmission using wireless sensor networks has profoundly impacted the safety, production, and productivity of industries and our lifestyle as well. After a decade of exponential growth, the wireless industry is one of the largest industries in the world. Therefore, it would be an injustice if the wireless communication is not explored for mining industry. Underground mines, which are characterized by their tough working conditions and hazardous environments, require fool-proof mine-wide communication systems for smooth functioning of mine workings and ensuring better safety. Proper and re-able communication systems not only save the machine breakdown time but also help in immediate passing of messages from the vicinity of underground working area to the surface for day-to-day normal mining operations as well as for speedy rescue operations in case of disaster. Therefore, a reliable and effective communication system is an essential requisite for safe working, and maintaining requisite production and productivity of underground mines. Most of the existing systems generally available in underground mines are based on line (wired) communication principle, hence these are unable to withstand in the disaster conditions and difficult to deploy in inaccessible places. Therefore, wireless communication is an indispensable, reliable, and convenient system and essential in case of day-to-day normal duty or disaster situations.

From reader reviews:

Delaine Valencia:

Do you have favorite book? When you have, what is your favorite's book? Reserve is very important thing for us to understand everything in the world. Each publication has different aim or even goal; it means that e-book has different type. Some people experience enjoy to spend their time for you to read a book. They may be reading whatever they consider because their hobby is usually reading a book. How about the person who don't like reading through a book? Sometime, particular person feel need book whenever they found difficult problem or even exercise. Well, probably you will require this Wireless Communication in Underground Mines: RFID-based Sensor Networking.

Jose Said:

Book is to be different for every grade. Book for children right up until adult are different content. As you may know that book is very important for us. The book Wireless Communication in Underground Mines: RFID-based Sensor Networking has been making you to know about other knowledge and of course you can take more information. It is very advantages for you. The reserve Wireless Communication in Underground Mines: RFID-based Sensor Networking is not only giving you considerably more new information but also to get your friend when you truly feel bored. You can spend your current spend time to read your publication. Try to make relationship using the book Wireless Communication in Underground Mines: RFID-based Sensor Networking. You never feel lose out for everything if you read some books.

Eric Hodges:

Precisely why? Because this Wireless Communication in Underground Mines: RFID-based Sensor Networking is an unordinary book that the inside of the guide waiting for you to snap this but latter it will jolt you with the secret that inside. Reading this book alongside it was fantastic author who write the book in such wonderful way makes the content inside of easier to understand, entertaining way but still convey the meaning entirely. So , it is good for you because of not hesitating having this any longer or you going to regret it. This amazing book will give you a lot of benefits than the other book possess such as help improving your ability and your critical thinking means. So , still want to postpone having that book? If I had been you I will go to the e-book store hurriedly.

Gail Blakely:

Many people spending their moment by playing outside together with friends, fun activity together with family or just watching TV the entire day. You can have new activity to enjoy your whole day by reading a book. Ugh, think reading a book can really hard because you have to use the book everywhere? It all right you can have the e-book, taking everywhere you want in your Smartphone. Like Wireless Communication in Underground Mines: RFID-based Sensor Networking which is getting the e-book version. So , why not try out this book? Let's observe.
