## The Global Financial Crisis

The global financial crisis has sent shockwaves through the world's economies, and its effects have been deep and wide-reaching. This book brings together a range of applied studies, covering a range of international and regional experience in the area of finance in the context of the global downturn.

The volume includes an exploration of the impact of the crisis on capital markets, and how corporate stakeholders need to be more aware of the decision-making processes followed by corporate executives, as well as an analysis of the policy changes instituted by the Fed and their effects. Other issues covered include research into the approach of solvent banks to toxic assets, the determinants of US interest rate swap spreads during the crisis, a new approach for estimating Value-at-Risk, how distress and lack of active trading can result in systemic panic attacks, and the dynamic interactions between real house prices, consumption expenditure and output. Highlighting the global reach of the crisis, there is also coverage of recent changes in the cross-currency correlation structure, the costs attached to global banking financial integration, the interrelationships among global stock markets, inter-temporal interactions between stock return differential relative to the US and real exchange rate in the two most recent financial crises, and research into the recent slowdown in workers' remittances.

This book was published as a special issue of *Applied Financial Economics*.
