HCV and Related Liver Diseases (Frontiers in Hepatology)

HCV and Related Liver Diseases (Frontiers in Hepatology)

More than 2 million people in Japan have chronic hepatitis C and many of them will lose their lives to liver cirrhosis or complications of hepatocellular carcinoma. Hepatitis C virus-related diseases are a serious concern both in developing countries and in Japan and the United States, where the number of patients is also in the millions. Therapeutic modalities recently developed in Japan, including interferon therapy and nutritional supportive therapy, are gaining worldwide acceptance. At this critical juncture, **HCV and Related Liver Diseases** presents new information on etiology, pathology, diagnosis, and therapy. Viral hepatitis was the theme of the Yamaguchi Symposium on Liver Disease, meeting in December 1998 and attended by leading hepatologists and virologists. Collected in this volume are the papers from the symposium, providing a valuable resource for hepatologists, gastroenterologists, and others working to understand and treat viral hepatitis.
