The principal changes that I have made in preparing this revised edition of the book are the following. (i) Carefully selected worked and unworked examples have been added to six of the chapters. These examples have been taken from class and degree examination papers set in this University and I am grateful to the University Court for permission to use them. (ii) Some additional matter on the geometrical application of vectors has been incorporated in Chapter 1. (iii) Chapters 4 and 5 have been combined into one chapter, some material has been rearranged and some further material added. (iv) The chapter on integral theorems, now Chapter 5, has been expanded to include an alternative proof of Gauss's theorem, a treatment of Green's theorem and a more extended discussion of the classification of vector fields. (v) The only major change made in what are now Chapters 6 and 7 is the deletion of the discussion of the DOW obsolete potential function. (vi) A small part of Chapter 8 on Maxwell's equations has been rewritten to give a fuller account of the use of scalar and vector potentials in electromagnetic theory, and the units employed have been changed to the m.k.s. system.
