Optimization: Insights and Applications (Princeton Series in Applied Mathematics) Jan Brinkhuis, Vladimir Tikhomirov

This self-contained textbook is an informal introduction to optimization through the use of numerous illustrations and applications. The focus is on analytically solving optimization problems with a finite number of continuous variables. In addition, the authors provide introductions to classical and modern numerical methods of optimization and to dynamic optimization.

The book's overarching point is that most problems may be solved by the direct application of the theorems of Fermat, Lagrange, and Weierstrass. The authors show how the intuition for each of the theoretical results can be supported by simple geometric figures. They include numerous applications through the use of varied classical and practical problems. Even experts may find some of these applications truly surprising.

A basic mathematical knowledge is sufficient to understand the topics covered in this book. More advanced readers, even experts, will be surprised to see how all main results can be grounded on the Fermat-Lagrange theorem. The book can be used for courses on continuous optimization, from introductory to advanced, for any field for which optimization is relevant.

From reader reviews:

Gregory Mackenzie:

Information is provisions for folks to get better life, information presently can get by anyone on everywhere. The information can be a understanding or any news even restricted. What people must be consider whenever those information which is inside former life are hard to be find than now could be taking seriously which one works to believe or which one the resource are convinced. If you obtain the unstable resource then you understand it as your main information we will see huge disadvantage for you. All those possibilities will not happen in you if you take Optimization: Insights and Applications (Princeton Series in Applied Mathematics) as the daily resource information.

Henrietta Roderick:

Reading a guide tends to be new life style in this era globalization. With looking at you can get a lot of information that can give you benefit in your life. Together with book everyone in this world may share their idea. Guides can also inspire a lot of people. A lot of author can inspire all their reader with their story or perhaps their experience. How to get the good score toefl, or how to teach children, there are many kinds of book that exist now. The authors in this world always try to improve their ability in writing, they also doing some research before they write to the book. One of them is this Optimization: Insights and Applications (Princeton Series in Applied Mathematics).

Robert Araiza:

Spent a free time to be fun activity to complete! A lot of people spent their free time with their family, or their very own friends. Usually they accomplishing activity like watching television, gonna beach, or picnic in the park. They actually doing same thing every week. Do you feel it? The first thing that you will ask may be what kinds of e-book that you should read. If you want to attempt look for book, may be the book untitled Optimization: Insights and Applications (Princeton Series in Applied Mathematics) can be fine book to read. May be it can be best activity to you.

Gerald McMullen:

As a scholar exactly feel bored to help reading. If their teacher expected them to go to the library or even make summary for some guide, they are complained. Just small students that has reading's heart and soul or real their leisure activity. They just do what the professor want, like asked to go to the library. They go to generally there but nothing reading seriously. Any students feel that examining is not important, boring and can't see colorful photos on there. Yeah, it is to become complicated. Book is very important for you. As we know that on this era, many ways to get whatever we would like. Likewise word says, ways to reach Chinese's country. Therefore this Optimization: Insights and Applications (Princeton Series in Applied

Mathematics) can make you really feel more interested to read.
